---

The answer is very simple: "we need 1 MWh/h for our production. Obviously we measure the energy input".  
You are not supposed to give more information.  
You for sure are not supposed to show them anything about the plant of JM. Exactly as you did with the IH persons.  
Warmest Regards,  
Andrea

**Subject:** Power

Andrea,

How do you measure the output? If they ask me, I need an answer for them. Simply telling them would not be sufficient (I think). I am assuming you measure the power returned, but we should be able to demonstrate on our side a measurement system.

Regards,

Jim

Jim:  
You will meet them 5 minutes and they are friends.  
We will talk 10 minutes before you meet them.  
Sleep well!  
Warmest regards  
Andrea

> When we met with some people last year (I do not remember who it was), one of them asked me how does Johnson – Matthey heat their platinum in other plants. At that time I didn't know you were cooking platinum sponge, and I didn't know what process they were using in other US operations, so I was very uncomfortable answering.
