Editorial

This new volume of the Journal of Condensed Matter Nuclear Science gives us another chance at discovering new experimental work, and new developments in the theoretical aspects of this extraordinary science. All the pieces of the puzzles are not there yet, so that we cannot fully understand what makes all this possible. Is there one mechanism, or several ones? Nobody knows yet. It might take many more years of hard work with large institutions before a clear picture emerges, and all pieces of the puzzle fall in place. But the fun and the pleasure are still present after more than a quarter century, and for a scientist this is very satisfactory.

Sincerely,

Jean-Paul Biberian
